GOVERNMENT OF PAKISTAN

NATIONAL DISASTER MANAGEMENT AUTHORITY (NDMA)

World Food Programme

UN WOMEN

United Nations Entity for Gender Equality and the Empowerment of Women

National Disaster Management Authority (NDMA) is the lead federal agency to deal with whole spectrum of Disaster Management (DM) in Pakistan. It was raised in 2007 through NDM Ordinance and was finally provided parliamentary cover by an act of Parliament in 2010. It is the executive arm of the National Disaster Management Commission (NDMC), which was established under the Chairmanship of the Prime Minister of Pakistan, as an **apex policy making body** in the field of DM. NDMA aims to develop sustainable operational capacity and professional competence to **coordinate emergency response of Federal Government** in the event of a national level disaster.

CHAIRMAN'S MESSAGE

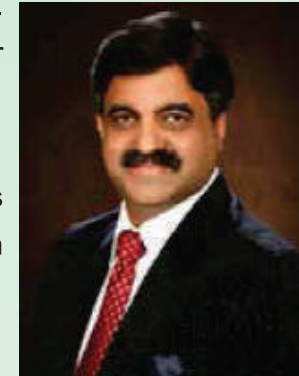

The impact of any hazard on different groups of society always spread in a non-uniform pattern viz a viz inherent capacity to respond. Women, children, older persons & persons with disabilities therefore emerge as most vulnerable segment of the society as they suffer adversely during a hazardous situation. Special attention is thus required for their safety and protection to address their vulnerability.

Cognizance of the given reality, NDMA established a Gender and Child Cell (GCC) in 2010 and developed the National Policy Guidelines for Vulnerable Groups in 2014. It has always remained the prime concern of NDMA that needs of Vulnerable Groups are met through an all-inclusive approach in the planning, preparedness, response, relief, recovery and rehabilitation phases of Disaster Management.

Availability of disaggregated data about vulnerable groups is vital for all stakeholders engaged in disaster management. NDMA thus took lead in the given direction. A statistical Study was designed to identify, collect, compile and summarize the salient demographic parameters of the most hazard prone districts of the Country. This was done in the form of data visualization, interactive maps, info-graphs, index charts and tables. The ease in comprehension was ensured to give visualization of population's disaggregated data, based on the criteria of age, gender, urban-rural settings, physical disabilities and related statistics. The Study culminated in form of a well-researched document providing an excellent baseline data in the given domain.

The statistics provided by this Document can be effectively utilized for planning of all disaster contingencies with special regards to vulnerable communities during and after any disaster. The Document is first of its kind and presents the highest degree of expertise. I am very much satisfied with the results and hope that this Document will act as a good source of information to various departments and civil society.

The Project granted a lot of confidence to NDMA and contributed in enhancement of its in-house capacity to undertake similar intervention in the future. I am pleased to render sincere thanks to the UN Women and WFP for their forthcoming sponsorship in carrying out this activity. I also extend my appreciation to the team members of Project Management Unit of NDMA, Project Manager of Gender & Child Cell of NDMA and various consultants involved, for the professional approach demonstrated in the development of this Document.

Major General Asghar Nawaz, HI(M)
Chairman, NDMA

ACKNOWLEDGMENT

This Document is accumulated/ formulated with the vision to highlight salient demographic parameters of the most hazard prone districts of the country that required comprehensive demographic data compilation, projection and analysis. We sincerely acknowledge the contributions of group members of Project Management Unit (PMU) and Gender & Child Cell (GCC) of National Disaster Management Authority (NDMA) for their sincere dedication, sound professional commitment, motivated collective efforts and keen interest in accomplishment of this assignment.

An esteem of gratitude is owed to the Chairman NDMA, Major General Asghar Nawaz HI(M), for his visionary approach, guidance and direction in constituting this document. He remained a source of at each stage of this project which ultimately had resulted in successful production of this document.

Our sincere and passionate felicitations to Member Disaster Risk Reduction, NDMA, Mr. Ahmed Kamal for his continuous support, prised guidance and relevant inputs based on his vast experience and knowledge, that contributed immensely in this endeavour.

We profoundly acknowledge the UN-WOMEN, UNICEF and WFP for their support and cooperation for all our initiatives and endeavours throughout the working of this project.

Special thanks to Pakistan Bureau of Statistics (PBS) for considerately sharing substantial information in the form of authentic statistical data and population projection equations for accurate estimation of various demographic parameters.

A profound appreciation for Ms. Nyghat Siddique, former Project Manager (GCC), NDMA, for conceiving and initiating the idea of this Project.

We would like to express deep appreciations for Mr.Muhammad Siddique (Project Consultant) and Mr. Asif Jan Turanzai (Senior MHVRA Expert, PMU, NDMA) for their ever prompt response in the provision of valuable inputs and concerted technical suggestions throughout the course of this study. Their tireless efforts in getting this venture to its successful completion are greatly appreciated.

In the end, we would like to extend our heartiest gratitude to all our relevant stakeholders who rendered their full support, contribution and active participation during compilation of this Document. Their contributions are sincerely appreciated and acknowledged.

Tania Humayun

Advisor/Program Manager, GCC, NDMA

Ehtisham Khalid Khan

Project Director, PMU, NDMA

PREFACE

This study is an effort to accumulate, project and analyze demographic information in disaggregated form for understanding population dynamics viz a viz levels, trends and distribution, with special focus on Vulnerable Groups due to their inadequate resilience to cope adverse effects of disasters. According to NDMA guidelines on Vulnerable Groups, this segment predominantly includes children, women, the elderly and mentally & physically challenged people

The study covers top 25 most vulnerable and hazard prone districts of Pakistan, as per National Disaster Management Plan (NDMP) implementation roadmap 2016-2030. The population demographic data is presented in a manner that shall provide interactive comprehension through maps, charts, info-graphs and tables.

In the context of disaster management, information concerning demographic parameters of the hazard-prone regions is essential to identify various segments of population. At the outset of any disaster and in its aftermath, needs & concerns of vulnerable population vary at different levels depending on their physical, social, cultural, environmental and economic conditions.

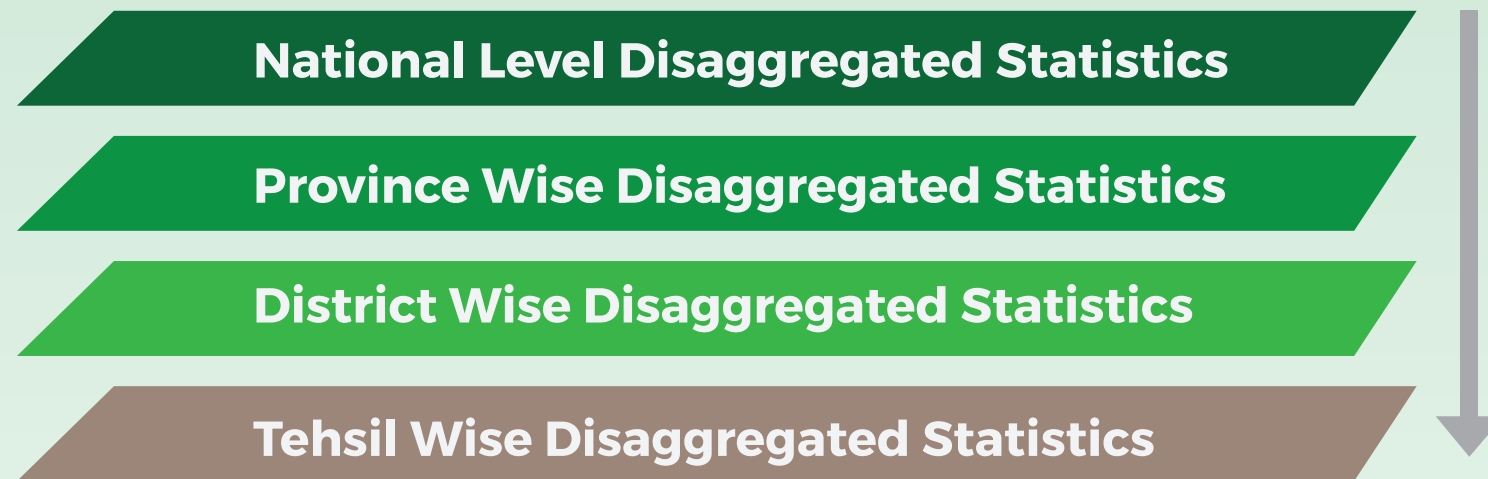

These groups are more likely to receive significant harm or remain underserved, unless their needs are adequately addressed in the whole gamut of disaster management including planning, preparedness, mitigation, disaster risk reduction (DRR), response, relief, recovery and rehabilitation.

It is with this vision that a comprehensive 'Population Disaggregated Atlas' has been developed by Project Management Unit, NDMA at the level of tehsil, for easy comprehension of population dynamics to facilitate policy makers for informed decision making. It is developed on the basis of comprehensive analysis, research and up-to-date information, gathered from various sources, rather than circumstantial evidences.

The foundation provided by this study will facilitate in making calculated decision for upholding balance and justice among all spheres of human society by offering data on multidimensional parameters, such as age, disability, gender and urban-rural settings to planners and policy makers.

ABOUT THIS ATLAS

Figure below illustrates the document structure:

METHODOLOGY

The total population, male & female percentages and age groups along with disability data for each district has been taken from the 1998 District Census.

The estimated population of each tehsil has been extrapolated to 2015, using Projection formula as given below:

$$P_n = P_0 \cdot (1 + R/100)^n$$

Where P_n = Current Population, P_0 = Baseline Population, R = Growth Rate of each tehsil and n = period.

The total estimated population of each district is calculated by summing all the projected population of its constituent tehsils.

Persons with Disabilities, has been calculated directly, from total projected population, by applying disability rate (%), determined in each district/tehsil.

The disaggregation measures have been performed by virtue of Index of Dissimilarity equation, for example, the distribution of Males and Females across the districts are calculated as follow:

$$(1/2) \text{ SUM } (M_i / M - F_i / F)$$

where M_i = Male population of the i^{th} area unit, M = total Male population in the given area, F_i = Female population of the i^{th} area unit and F = total Female population in the given area.

The age-wise disaggregation data has been taken from 1998 census rate. Due to unavailability of information required for age-wise population projection such as mortality rate, fertility rate, migration rate etc, the age-wise disaggregation of population has not been projected to 2015.

All projections have been calculated on the basis of inter-census growth rate 1981 and 1998 censuses and do take in account the fertility rates and migration patterns.

GLOSSARY OF TERMS

- **Average Household Size** Average number of persons per household
- **Blind or Visually Impaired** A person with visual impairment or severely reduced functioning
- **Crippled** A person unable to walk or move properly due to restricted muscular movements because of accident, birth imperfection or a disease.
- **Deaf & Mute** A person with severe hearing impairment or severely reduced functioning due to which he/she is unable to use a spoken language, thus technically “mute”.
- **Household** A social unit living together as a family
- **Infant Mortality Rate** The number of deaths of infants under one year of age per 1,000 live births in a given year
- **Insane** A state of mind which prevents normal perception, behavior, or social interaction due to serious mental illness or imperfect mental development.
- **Life Expectancy** The average number of years a person is expected to live prior to death in a given geographical region.
- **Mentally Retarded** A person with disturbed thought process and emotions with limited ability to learn, owing to which he/ she might perceive the world in distorted manner.
- **Mortality Rate** Number of deaths recorded in a population of particular region in a year.
- **Population Growth Rate** The growth rate is the rate at which a population is increasing (or decreasing) in a given year
- **Population Projection** Population Projections are estimates of population number typically based on an estimated population consistent with most recent decennial census and are produced using cohort-component method.
- **Rural Area** A rural area is an open area that has very low population and building density. Generally rural areas are away from cities/towns and its inhabitants are mostly linked with agriculture based livelihood.
- **Several Disabilities** A person with more than one physical or mental disorder.
- **Urban Area** An urban area is a human settlement with high population density and infrastructure of built environment. Urban areas are created through urbanization and are categorized by urban morphology as cities, towns, conurbations or suburbs.
